Manufacturing - Process Overview

1. Board Preparation

Cutting: Boards are cut to the required dimensions using a saw.

Edge Banding: Edges of the cut boards are finished with edge banding to ensure smoothness and durability.

2. CNC Machining

Drilling and Cutting: Boards are processed through the CNC machine to create necessary lines and holes for assembly.

3. Quality Check

Inspection: Each part is checked for accuracy and quality control before moving forward.

4. Door and Frame Production

Cutting: Boards are cut to the specifications needed for doors and frames.

Assembly Preparation: Cut boards are prepared for assembly into doors and frames.

Sanding: Boards are sanded to smooth the surface, preparing them for primer.

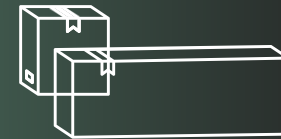

5. Priming and Painting

Primer Application: Boards receive a primer coat in the paint machine and are allowed to dry for one day.

Sanding with Primer: Primed boards are sanded to ensure a smooth surface.

Painting: Boards are cleaned and painted, then undergo quality control checks

Final Assembly: Doors and frames are assembled, inspected for quality, and then prepared for packaging.

6. Packaging

Final Assembly: Doors, frames, and their respective boxes are carefully combined.

Securing: Packages are secured to prevent damage and ensure all components are included.

Palletizing: Packages are placed on pallets, ready for shipment.

Shipping: Pallets are loaded into containers for global distribution.
